VALUE ADDED SERVICES

A leading supplier of infrastructure solutions and Value Added Services

As a leading supplier of infrastructure solutions and value added services to telecommunication operators, Teligent Telecom support its customers worldwide with network services, call completion solutions, enterprise services, mass calling systems and real-time charging enablers. All solutions are based on the award winning Teligent P90/E – a true single-platform architecture for service development, enabling flexible, infinitely scalable services that boost operator revenues and increase subscriber stickiness.

Leading operators worldwide have deployed Teligent Telecom's solutions, including:
- BT
- SingTel
- SMART/PLDT
- Telenor
- TeliaSonera
- Maroc Telecom
- Verizon
- Vodafone
- Telekom Malaysia

We specialise in complex migration projects in which existing application service architecture is replaced by a more capable, cost effective and future proofed solution from Teligent Telecom.

The dedicated people at Teligent Telecom have provided Value Added Services to network operators worldwide for over 15 years. The focus is on Messaging, Enterprise Services like IMS/SIP and VoIP, Mass Calling/Voting, Call Completion and Charging segments where we provide customer specific solutions based on a strong product portfolio. Teligent typically provides projects in a turnkey fashion, including design, development, implementation and ongoing support services.

Moving the Power: How user choice can drive your revenues

The telecom market-place is never-ending; with daily price pressure and, at the same time, a demand for more services. Both Operators and Vendors need to continuously find attractive services that generate value for the mobile subscriber. All players are pushed to be more efficient in a very competitive landscape, to understand the market dynamics, trends and relentlessly push for new and improved services.

We firmly believe in moving the power to the subscriber; the power to decide on what services to use and when. It gives the user a bespoke "my service" experience and it also drives traffic for the operators and reduces churn as these services rapidly become "sticky".

Teligent's SDP, the Teligent P90/E platform, represents the best-of-breed technology selection for real-time, fully redundant telecommunication application servers. By providing all of our services on a distributed multi-application platform we have enabled leading operators worldwide to create and deploy revenue generating, churn reducing offers with a specific uniqueness in every market.

Our Call Completion Engine is an application suite that is focused on generating revenue by ensuring every call in your network becomes a completed, billable call. Our 'Smart Router' technology is capable of routing and controlling calls to and from mobile, fixed and VoIP networking environments. In addition by providing voicemail diversion control for internationally roaming users (allowing operators to comply with the new EU regulations for voicemail roaming subscribers) the Smart Router can also screen calls, perform simultaneous soft-phone and mobile ringing as well as subscriber-definable call-treatments.

The uFLOW application is an innovative Value Added Service which combines the traditional elements of telecommunication such as call control and routing with the latest subscriber-driven concepts of advanced visual messaging and smart-phone client control of services.

Teligent Telecom has a strong understanding of its customers' need to continue to increase the ARPU among their subscriber base and to effectively gain market share in an ever increasingly competitive market.

Our services and service platforms are for these reasons designed to be flexible enough to adapt to changing market requirements whilst providing a carrier grade experience in terms of performance and availability.

If you'd like to know more about Teligent Telecom and how you can boost ARPU with our world-leading technology and applications, please contact a Teligent Telecom representative in **booth 2F13** for more details.
