## Mass Calling and Voting

Teligent Telecom has one of the most versatile and advanced Mass Calling solutions in the world which is capable of supporting thousands of calls per second.

Mass Calling services continue to be more and more important to carriers as the ARPU continues to increase, both for simple tele-voting as well as advanced interactive services. The Teligent Telecom Mass Calling solution combined with our market expertise allows the operator to implement a future-proof Mass Calling service foundation that is second to none.

### Enhance your business

With the success of interactive television shows such as "Pop Idol" and "X Factor", mass calling services have become increasingly popular. This trend will continue as media companies continue their search for new revenues.

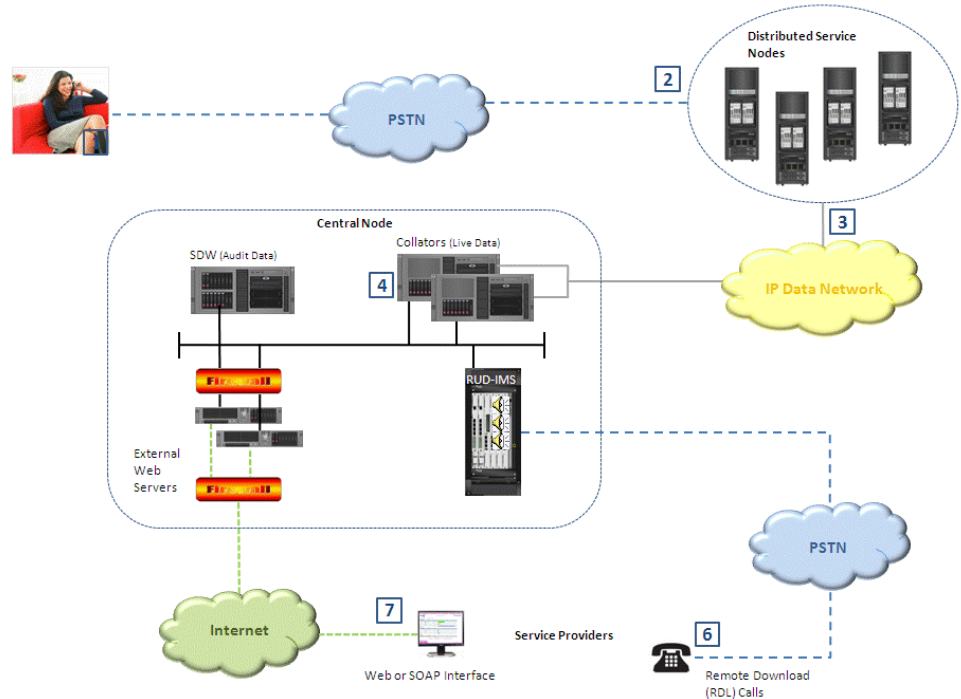

Mass calling events place high demands on telephony networks that are typically designed to provide services for person-to-person calls. As sudden tidal waves of very short duration calls flood the network, vital telephony services can be adversely affected for large geographical areas. This can result in not only loss of revenue and reputation for the network operator but also frustration for subscribers, regardless if they participate in the mass calling event or not.

The Teligent Telecom Mass Calling Solution is able to provide the operator with a national distributed source of recorded announcements for delivering corporate messaging services, high profile services such as Tele-voting competitions and Live Feed services such as live sporting commentary.

## Convergent networking

All of Teligent Telecom's Value Added Services are based on our patented middleware-platform the Teligent P90/E. The Teligent P90/E is an industry leading converged telephony platform which supports existing fixed and mobile networking as well as next generation SIP and IMS.

Proven in leading tier 1 operators worldwide, the Teligent P90/E offers unprecedented networking capacity and scalability. Combined with the inbuilt multi-platform, multi-site deployment possibilities the Teligent P90/E is suitable for networks both large and small allowing localised service offerings from a centralised fully-redundant topology.

## Industry leading capacity, scalability and resilience

Teligent Telecom's applications serve billions of calls a year across Europe, Africa and Asia to millions of subscribers with the latest features via multi-lingual and multi-cultural voice and web interfaces. The Teligent P90/E is proven in leading-operators worldwide to support fully redundant distributed configurations ensuring your services never fail to deliver.
