

*Enable your legacy voicemail to serve  
your new network technology*

*Assure service transparency for your users*

*NextGen Messaging with guaranteed ROI*

## Teligent Messaging Service Broker

Operators all over the world are adjusting strategies on CAPEX and OPEX investments with a trend towards 'sweating-out' as much investment from existing services and platforms to remain lean and competitive in the current challenging world-market conditions. Customers are still demanding efficient and leading-edge services as well as access to new technologies such as LTE and IMS/SIP-based services.

If you have an existing voicemail messaging service in your network and have a need to ensure maximum reuse of your investment the Messaging Service Broker is designed with you in mind. Many operators are struggling with the issue of providing access to existing voicemail platforms from new network deployments involving technologies such as IMS.

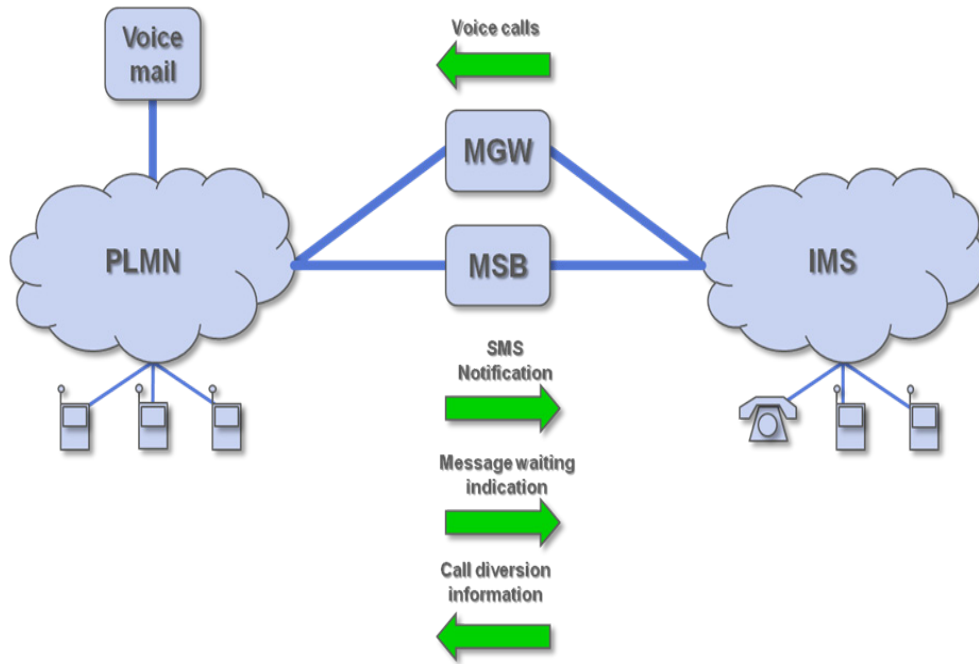

### Migration or duplication?

Traditionally operators have little choice when deploying new network technologies: existing services can either be migrated to support the new technology or duplicated where a new service platform is run in parallel, one in each network. The CAPEX and OPEX overheads of such approaches have lead Teligent Telecom to develop a new solution based on our patented telecommunications platform (the Teligent P90/E) directly in response to our customer's needs.

The Teligent Messaging Service Broker is a SIM like application (Service Interaction Manager) which is dedicated to the needs of operators with legacy voicemail platforms; the MSB allows the operator to keep their existing service and, in addition, provide the same service offering to newer networks without the need to migrate or duplicate the service platform. The OPEX and CAPEX reduction with this approach is clear; MSB allows a much smoother path with less integration headaches at a greatly reduced investment level.

## How does it work?

The Teligent Messaging Service Broker sits between your legacy mobile or fixed network and your NG Network (IMS, SIP, etc.) providing intelligent translation of signaling (to ensure all the features of your VM platform are available no matter the access method). In addition, issues such as MWI (Message Waiting Indication), SMS notification, HLR presence information, etc. are solved from a single MSB deployment.

In addition to mobile/fixed and IMS/SIP service interaction the MSB is also capable of providing service interaction between fixed and mobile networks. The possibilities for further service offerings based on existing platforms, as well as cross network pre-paid billing interaction, open up a whole new range of possibilities for the operator to build and expand on existing investments.

## Guaranteed ROI

At Teligent Telecom we believe in assisting our customers with a consultative approach to ensure we are a partner to our customers, not just a traditional supplier. With this aim in mind we offer a range of facilities and services such as managed hosting, OPEX based financing with minimal CAPEX as well as the ability to assist in market and business-case analysis.

## For more information about Teligent Telecom's MSB

If you would like to know more about the Messaging Service Broker and how it can help you remain competitive in today's market, please contact your local Teligent Telecom sales office to arrange a meeting to discuss your individual operator needs and how we can work together to ensure a market-leading approach to telecommunications.
